

MUHAMMAD ASAD

Full-Stack Developer | React, Next.js & Node.js

DEAR HIRING MANAGER,

I'm a full-stack developer who likes owning products end-to-end rather than just individual features. I maintain UrduMagic, an open-source npm package (now v0.3.0 with full Next.js SSR support) that gives websites offline, zero-latency English/Urdu translation — it's actually what powers the bilingual experience on Atmandi, a livestock marketplace I founded and built solo, from the database schema to the deployed product. Atmandi is a Next.js and Node.js/Express monorepo with real-time chat (Socket.io + Redis), geospatial search over MongoDB, an admin panel for moderation and analytics, and local payment tracking (Easypaisa, JazzCash). Building it alone meant being responsible for the frontend, backend, auth, infrastructure, and every bug in between — which is the kind of ownership I want to keep bringing to a team.

Earlier in my career, I worked as a Front-End Developer at TechAbout and as a freelance MERN developer for clients across multiple industries. That gave me a solid foundation in React, responsive design, and working with remote teams across time zones.

I'd like to bring that same full-stack ownership — from architecture to shipped product — to your team. I'm based in Pakistan but comfortable with async, cross-timezone collaboration, and I'd welcome the chance to talk about how I can contribute.

Thank you for your time and consideration.

Best regards, Muhammad Asad Lahore, Pakistan
